springbuk

Transitioning from HDMS

Below you will find what you love from HDMS plus the additional benefits Springbuk has to offer.

Concern: Fear of Losing Historical Data

? We have years of data in HDMS. Will we lose that?

+ We understand the fear of losing historical data. The HDMS team has worked with us previously to migrate clients, and they will do this again for you. **Springbuk is committed to working with HDMS to obtain any historical data** that cannot be provided by your current data suppliers.

Concern: Uncertainty Around Finding a Reliable Replacement

? How can we ensure that the new platform we choose to replace HDMS offers both robust analytics and a seamless transition with hands-on support for our team?

+ **The Springbuk Health Intelligence™ platform is designed to be intuitive.** In addition, **our dedicated Customer Success team will provide personalized onboarding and continuous support,** so you're never left to figure things out on your own. We prioritize reliability and ease of use, and **our robust training ensures your team can quickly adapt and maximize the value of our advanced analytics from day one.**

Concern: Disruption to Health Data Analytics Processes

? How disruptive will the data migration and transition be?

+ Springbuk offers a fully managed, painless data migration process that ensures all historical data is transferred without disruption. **We can typically onboard a new client within 90 days of receiving their data.** At a high level, we use hundreds of critical quality checks encompassing anomaly detection, comparison against vendor report quantities, and variance detection.

? During this transition, can we retain any consistency so we don't have to learn new methods?

+ HDMS and Springbuk use many of the same industry standard data enrichments including **Optum Symmetry ETGs, ERGs and EBM Connect (Gaps in Care).** Other vendors use their own proprietary episode grouper and GIC logic.

Concern: Deadlines & Time Constraints for Transitioning Quickly

? With HDMS shutting down in 2025, how quickly can we move our data?

+ Waiting until late-2025 could leave your team scrambling to transition. **By starting now, you'll avoid the last-minute rush and ensure a smooth, well-planned migration.**

Maintain What You Love About HDMS ✔ & Gain Additional Capabilities ➕

Industry Standard Enrichments: Optum ETG, Optum EBM Connect (HDMS CareShield), Optum ERGs, NYU ER, AHRQ Avoidable Admits, Dartmouth Atlas, FirstDataBank (Rx)
Optum Symmetry Risk Engine (prospective risk + ED/IP risk)

Analytic Enrichments: Springbuk Encounters: Outpatient Visits and Inpatient Admissions (HDMS Compression), Springbuk Service Type Classifications
Springbuk Service Type Classifications include dental and vision claims

Social Determinants of Health
CDC Social Vulnerability Index (SVI) at the census tract level

Benchmarking: MarketScan National Benchmarks, Optum Benchmarks
Springbuk Book of Business Benchmarks

Interactive Dashboards
Easy-to-use, intuitive user interface

Report Creation and Distribution
Exportable presentation-ready format

Receive Additional Value with Springbuk

Other Solutions ✖

Monthly update cycle for all clients that results in **4-6 week data latency**

Lack HITRUST certification

Users often have to **mine their own data** to identify opportunities

Lack data-driven partner identification

Springbuk Advantage ➕

Continuous Data Pipeline updates your monthly data in less than 3 days of receipt

The highest standards in **data security**

100+ Actionable **Insights** at your fingertips

Activate matches employer data opportunities with potential partner programs
